Predavanja Lectures	Seminar Seminar	Vaje Tutorial	Klinične vaje work	Druge oblike študija	Samost. delo Individ. work	ECTS
24	0	6	0	0	120	5

Nosilec predmeta / Lecturer:	
prof. dr. Tatjana Hodnik	

Jeziki / Languages:	Predavanja / Lectures: slovenščina, angleščina
	Vaje / Tutorial: slovenščina, angleščina

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:	Prerequisites:
Vpis v letnik študija.	The enrolment in the study year is required.

Vsebina:	Content (Syllabus outline):
Odkrivanje matematike: 1. razvoj pojma število, izbrani pojmi v geometriji v preteklosti in danes; 2. reprezentacije matematičnih idej (didaktični materiali) skozi čas; 3. veliki matematiki, njihova življenja in odkritja. Zahetni pojmi v matematiki: 1. zahetni pojmi v matematiki - pojmi, katerih reprezentacije so zelo kompleksne, lahko tudi nemogoče. Nekaj primerov: operacije z ulomki, število 0, računski zakoni, procenti, struktura števil, elementarne računske operacije, hierarhija v geometriji (geometrijske oblike, dimenzijske geometrijski objektov, merjenje). Reševanje problemov: 1. opredelitev matematičnih problemov; 2. vloga didaktičnih sredstev in strategij pri reševanju problemov; 3. matematizacija oz. razvijanje matematičnega jezika; 4. horizontalna (od problemov do matematike in nazaj) in vertikalna matematizacija (glede na tri nivoje: neformalen, semi-formalen in formalen jezik).	Course 1(Re-inventing mathematics): 1. the development of number concepts, some concepts in geometry in the past and nowadays; 2. representing mathematical ideas (learning materials) throughout times; 3. great mathematicians and their lives and discoveries. Course 2(Thresholds in mathematics): 1. thresholds as difficult concepts in mathematics (representations for those concepts are sometimes impossible or very complex). Some examples: operations with fractions, number 0, unitizing, distributive law, percentage, structure of the numbers, elementary addition and subtraction, hierarchy in geometry (concepts of shapes, growing dimensions in space and in measures). Course 3(Problem solving): 1. problems; 2. learning materials and strategies for problem-solving; 3. mathematization and mathematics language; 4. horizontal (from the problem to the mathematics and back) and vertical mathematization (according to the three levels: informal, semi-formal, formal).

Temeljni literatura in viri / Readings:

1. FOSNOT, C. T. and Dolk, M. (2001) Constructing number sense, addition and subtraction. Portsmouth, Heineman
2. FOSNOT, C. T. and Dolk, M. (2001) Constructing multiplication and division. Portsmouth, Heineman
3. Book of selected research paper - around 300 pages (we choose relevant research papers) which is updated every year.

Cilji in kompetence:

Študent:

1. izkaže znanje o zgodovini razvoja pojma število in o različnih reprezentacijah tega pojma skozi čas;
2. pozna in razlikuje platonska, neplatonska in Arhimedova geometrijska telesa;
3. pozna razvoj pojmov iz merjenja v zgodovini;
4. spremišljajo otroke pri odkrivanju matematike;
5. interpretira in primerja različne učne načrte za matematiko;
6. pozna zahtevnejše pojme v matematiki;
7. razvije učne pristope za poučevanje in preseganje zahtevnih pojmov;
8. prepozna, poda in rešuje matematične probleme;
9. diskutira in vrednosti različne strategije reševanja problemov;
10. komunicira in reflektira (poučevanje) matematike.

Splošne kompetence:

1. poznati spremembe v izobraževanju v evropskih državah in doma;
2. poznati skupne temelje evropskega izobraževanja;
3. izboljšati znanje angleškega jezika;
4. izboljšati veščine medkulturnega sodelovanja;
5. razviti veščine pojasnjevanja, utemeljevanja in reševanja problemov;
6. razvijati kritično mišljenje;
7. razvijati toleranco;
8. razvijati svoje znanje in omogočati/dopuščati drugim (učencem), da razvijajo svojega.

Specifične kompetence: Odkrivanje matematike

1. poznati zgodovino matematike (ključne vsebine oz. razvoj pojmov: število 0, matematiki v EPTE sodelujočih državah in njihovo delo, ženske matematičarke, neskončnost, decimalna števila, ulomki, ploščina, evklidska, ne-evklidska geometrija);

Objectives and competences:

The student is able to:

1. demonstrate knowledge of the history of number concepts and about number representations;
2. demonstrate knowledge about platonic, non-platonic and Archimedes solids;
3. demonstrate knowledge about the history of measurement;
4. accompany children to re-invent mathematics;
5. interpret and compare different curricula;
6. recognize thresholds/landmarks;
7. develop teaching approach for children to overcome thresholds/ landmarks;
8. recognize, put and solve problems;
9. discuss and evaluate strategies for problem solving with students and children;
10. communicate and reflect about mathematics.

Generic competences: The student is able to:

1. reveal changes in education in European countries and in home education;
2. identify the common ground for European education;
3. improve language skills;
4. improve intercultural skills;
5. to develop aptitudes for reasoning and a problem-solving way of thinking;
6. develop critical thinking;
7. develop tolerance;
8. build his/her own knowledge and let his/her pupils build their own knowledge.

Specific competences: Course 1(Re-inventing mathematics):

1. to know the history of mathematics (essential topics: 0, some mathematicians of participating country and their work, women mathematicians, infinity, decimal numbers, fractions, area, Euclidian - non Euclidean geometry);
2. to understand mathematics as a human activity, necessary, interesting and fascinating for all.

<p>2. razumeti matematiko kot človekovo dejavnost, ki je potrebna in zanimiva za vse.</p> <p>Zahtevni pojmi v matematiki:</p> <ol style="list-style-type: none"> 1. razumeti in argumentirati zahtevne pojme v matematiki v nacionalnem in mednarodnem kontekstu; 2. konstruirati probleme za učence, ki jim pomagajo pri razumevanju zahtevnejših pojmov in načrtovati dobro poučevanje (učne pristope) teh pojmov. <p>Reševanje problemov:</p> <ol style="list-style-type: none"> 1. razviti in analizirati meta-kognitivne procese in strategije, ki so pomembni pri reševanju problemov (npr. pospološevanje v algebri na osnovi primerov iz aritmetike).
--

<p>Course 2(Thresholds in mathematics):</p> <ol style="list-style-type: none"> 1. to understand the idea of thresholds in mathematics from different perspectives (international and national) and to give arguments for them; 2. to construct problems for children to get over the thresholds and to plan good education on those topics. <p>Course 3(Problem solving):</p> <ol style="list-style-type: none"> 1. to develop and analyze meta-cognitive processes of solving problems and the strategies used (for example to experience thresholds from arithmetic examples to generalization in algebra).
--

Predvideni študijski rezultati:

<p>Znanje in razumevanje: Odkrivanje matematike</p> <ol style="list-style-type: none"> 1. razloži, analizira in predstavi zgodovinsko ozadje razvoja nekaterih matematičnih pojmov (npr. število 0, neskončno...); 2. pojasni odkritja v matematiki s primeri. <p>Zahtevni pojmi v matematiki:</p> <ol style="list-style-type: none"> 1. pojasni zahtevne matematične pojme pri poučevanju matematike države gostiteljice EPTE matematike; 2. pojasni razlike in podobnosti poučevanja matematike (poudarek na zahtevnih matematičnih pojmih) v njegovem izobraževalnem sistemu in v sistemu države gostiteljice; 3. izdela materiale za učenje, kontekste in kontekstualne probleme za učenje in poučevanje zahtevnih matematičnih pojmov; 4. razvije učne enote za poučevanje zahtevnih matematičnih pojmov; 5. razlikuje in zna uporabiti tri nivoje učenja in poučevanja matematike: neformalen, semi-formalen in formalen. <p>Reševanje problemov:</p> <ol style="list-style-type: none"> 1. demonstrira večbine reševanja problemov, uporabo različnih strategij, oblikuje problemske situacije, poišče pospološitev, identificira znanje, ki je potrebno za reševanje problemov, izbere ustrezno reprezentacijo za problemsko situacijo...; 2. spodbuja, aktivno spremišlja učenca pri horizontalnem in vertikalnem matematiziranju.
--

Intended learning outcomes:

<p>Knowledge and understanding: Course 1(Re-inventing mathematics):</p> <p>The student is able to:</p> <ol style="list-style-type: none"> 1. explain analyses and present history background of some essential mathematical concepts (example: number 0, infinity...). 2. describe discoveries of mathematicians by demonstrating with examples. <p>Course 2 (Thresholds in mathematics):</p> <p>The student is able to:</p> <ol style="list-style-type: none"> 1. describe a part of the mathematical learning landscape including the thresholds of the guest country; 2. describe differences and similarities between the landscape of his own country and that of the guest country; 3. build some learning materials, contexts and context problems to allow primary school pupils to obtain the respective landmarks/thresholds; 4. develop a series of lessons to allow his pupils to obtain a landmark in the mathematical landscape; 5. distinguish the three levels in the learning process: informal, semi-formal and formal. <p>Course 3(Problem solving):</p> <p>The student is able to:</p> <ol style="list-style-type: none"> 1. demonstrate problem-solving skills for finding the strategy: formulating a problem, comprehending a problem, finding patterns, identifying knowledge needed for solving problems, making conjectures, generalizing, choosing appropriate representation of a problem, proving... 2. accompany children in horizontal and vertical mathematization.
--

Metode poučevanja in učenja:

Aktivno in sodelovalno učenje, ustvarjanje okolja za učenje, posameznikom prilagojene zaposlitve.

Learning and teaching methods:

Active and collaborative learning, building a learning community, personalizing tasks.

Načini ocenjevanja:**Delež (v %) /
Weight (in %)****Assessment:**

dnevnik refleksij, ki predstavlja odgovore na izzive predmeta ter osebne in profesionalne ocene izkušenj pri predmetu	50	reflective diary in response to challenges of the module, and to the personal and professional value of the experience
prezentacije, seminarsko delo, samorefleksija, izdelava materialov za poučevanje in učenje, učne priprave (3-5), refleksija izkušenj s prakse	50	presentation, seminar work, self-evaluation, learning material, lesson plans (3 - 5) and reflection on teaching practice
