

UČNI NAČRT PREDMETA / COURSE SYLLABUS						
Predmet:	S POSKUSI SPOZNAJMO SVET OKOLI NAS					
Course title:	Get to know the world around us by the use of experimental work					
Vrsta predmeta / Course type	D - Splošni izbirni predmet					
Univerzitetna koda predmeta / University course code:	/					
Predavanja Lectures	Seminar Seminar	Vaje Tutorial	Klinične vaje work	Druge oblike študija	Samost. delo Individ. work	ECTS
30	0	30		0	60	4
Nosilec predmeta / Lecturer:	prof. dr. Vesna Ferk Savec					
Jeziki / Languages:	Predavanja / Lectures: slovenščina, angleščina Vaje / Tutorial: slovenščina, angleščina					
Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:	Prerequisites: Srednješolsko znanje naravoslovja.					
Vsebina:	High school knowledge of science.					
Pomen poskusov pri učenju in poučevanju naravoslovnih vsebin (kognitivna, afektivna, psihomotorična domena). Naravoslovno (predvsem kemijsko) ozadje povezano s spoznavanjem snovi s poskusi povezanimi s: 1. snovmi iz domačega gospodinjstva (npr. mila in detergenti, superabsorbenti, hrana in pijača, kozmetika); 2. zanimivimi snovmi iz naravnih virov (npr. naravna barvila, eterična olja, naravne farmacevtske učinkovine); 3. snovmi pomembnimi za okolje (npr. fosilna goriva vs. biogoriva, sinteza in razgradnja bioplastike, kvaliteta in čiščenje vodnih virov...); 4. sodobnimi materiali (npr. uporabnimi v tekstilstvu, gradbeništvu, ortotiki in protetiki); 5. snovmi pomembnimi za podjetja iz lokalnega okolja (npr. proizvodnja/predelava papirja, stekla, polimerov); 6. dodatne teme na predlog slušateljev.	Content (Syllabus outline): The importance of experiments in teaching and learning of science (cognitive, affective, psychomotor domain) Science (primarily chemical) background related to the knowledge about getting to know compounds related to: 1. domestic household substances (eg soaps and detergents, superabsorbents, food and beverages, cosmetics); 2. interesting substances from natural sources (eg natural dyes, essential oils, natural pharmaceutical ingredients); 3. substances that are important for the environment (eg fossil fuels vs. biofuels, synthesis and degradation of bioplastics, quality and purification of water resources ...); 4. modern materials (eg usable in textile, building and construction, orthotics and prosthetics); 5. substances that are important to companies from the local environment (eg paper-, glass-, polymers- industry); 6. additional topics on the student's proposal.

Cilji in kompetence:

- Poznavanje, razumevanje in uporaba pojmov povezanih z izvajanjem eksperimentalnega dela.
- Povezovanje makroskopskih zaznav povezanih z naravoslovnimi (predvsem kemijskimi) pojmi in procesi iz vsakdana z razlagom na submikroskopski ravni in z zapisi na simbolni ravni.
- Usposobljenost za varno ravnanje s snovmi in varno eksperimentiranje, sposobnost ocene varnosti dela.
- Organizacija in vodenje eksperimentalnega dela.
- Razvijanje sposobnosti naravoslovnega razmišljanja.
- Vrednotenje in interpretacija ter povezovanje informacij in podatkov.
- Interpretacija eksperimentalnih podatkov in njihova povezava s teorijo (tudi obratno).
- Razumevanje okoljske problematike in ukrepov za preprečevanje in zmanjšanje onesnaževanja.

Objectives and competences:

- To understand and use the professional concepts in relation to experimental work.
- To connect macroscopic perceptions everyday life concepts and processes with their explanation at a sub-microscopic level and writings at a symbolic level.
- To be able to handle matter and perform experiments safely, and be able to assess work safety.
- To organize and manage experimental work teamwork;
- To develop natural science thinking.
- To evaluate, interpret and relate information and data.
- To interpret experimental data and understand the findings in relation to the theory (and vice versa).
- To understand environmental problematic and regulations for preventing and decreasing pollution.

Predvideni študijski rezultati:

Znanje in razumevanje:
1. naravoslovnih (predvsem kemijskimi)

Intended learning outcomes:

Knowledge and Understanding:
1. everyday life concepts and processes listed

pojmov in procesov iz vsakdana, ki so navedeni pri vsebini predmeta;

2. pomena eksperimentalnega dela za razvijanje sposobnosti opazovanja in za ponazoritev lastnosti kemijskih spojin iz vsakdana;
3. eksperimentalnih postopkov in teoretičnih osnov izbranih eksperimentov za prikaz lastnosti izbranih snovi;
4. pravil za varno delo s kemikalijami in aparaturami.

Uporaba:

1. eksperimentalnih postopkov in teoretičnega znanja za spoznavanje sveta okoli nas.

Refleksija:

1. sposobnost kritične ocene eksperimentalnega dela, tako iz vidika primernosti izbora eksperimenta, kakor tudi ustreznosti za njegovo uporabo v šolski praksi.

Prenosljive spremnosti:

1. izkustveno delo;
2. celovito reševanje problemov,
3. uporaba domače in tujje literature ter drugih virov;
4. uporaba IKT;
5. poročanje (ustno in pisno);
6. identifikacija aktualnih problemov in njihovo inovativno reševanje;
7. kritična analiza in sinteza.

in the contents of this subject;

2. the role of the experiment in development of students' observation abilities and for the representation of properties of the chemical compounds;
3. the experimental procedures and the theoretical basics of the selected experiments to present the properties of the selected compounds;
4. rules for safe working with chemicals and apparatus.

Application:

1. experimental procedures and theoretical knowledge to get to know the world around us.

Reflection:

1. ability of critical assessment of experimental work, both in terms of the adequacy of the selection of experiments, as well as adequacy for its implementation in school practice.

Transferable skills:

1. "hands-on" approach;
2. uses comprehensive problem solving;
3. uses of domestic and foreign literature and other sources;
4. uses of ICT;
5. reports (oral and written);
6. identification of current problems and theirs innovative solving;
7. critically analyses and syntheses.

Metode poučevanja in učenja:

Eksperimentalna predavanja, eksperimentalne vaje.

Learning and teaching methods:

Experimental lectures and laboratory work.

Načini ocenjevanja:

Delež (v %) / Weight (in %)

Assessment:

Projektna naloga s predstavljivijo in demonstracijo.	100	Project task with its presentation and demonstration.
